QUEENSLAND SAWMILL STATISTICS - DECEMBER QUARTER, 1956.

This bulletin has been compiled, in co-operation with the Sub-Department of Forestry, from returns lodged by the proprietors of sawmills licensed throughout the State. Some returns had not been received when these statistics were compiled, but estimates were included for them. The figures for the last two quarters are therefore subject to revision when final figures for 1956-57 are completed.

Log Consumption (see Tables 1 and 3).

In the December quarter of 1956 mills used logs measuring 120,845,000 super. feet, which was very close to the usage in the corresponding quarter of 1955, being 620,000 super. feet., or 0.5 per cent., less than the total for that quarter. The medium-sized mills, with capacities of from 5,000 to 15,000 super. feet, recorded a total cut nearly equal to the combined totals of all other sawmills. Mills producing plywood and veneers continued the high level of production which has been in evidence since September quarter of 1954.

Mills in Operation (see Table 2).

The total of 728 mills operating in the December quarter of 1956 was 5 less than in the September quarter of 1956, and 16 less than in December quarter, 1955. In the northern divisions of Townsville and Cairns, 115 mills operated with an average cut of 231,600 super. feet per mill, while in the rest of the State 613 mills averaged 153,700 super. feet per mill. The 210 mills with daily capacities of from 5,000 to 15,000 super. feet were the largest consumers of logs with a total of 52.5m. super. feet. The 448 mills with daily capacities of under 5,000 super. feet used 33.5m. super. feet, while the 33 large mills with capacities of more than 15,000 super. feet used 23.9m. super. feet, and plywood and veneer mills used 10.9m. super. feet.

Species of Timber (see Tables 1 and 3).

Compared with the previous December quarter, relatively large increases in the cuts of plantation thinnings, cypress pine, and cabinet woods were offset by a large decrease in miscellaneous timbers and a small relative decrease in the very large cut of hardwoods. Of the 120,845,000 super. feet of log timber used, hardwoods of all kinds accounted for 62,692,000 super. feet - over half of the native logs used. Hoop and bunya pine amounted to 11,814,000 super. feet, cypress pine to 13,530,000 super. feet, and cabinet woods to 9,272,000 super. feet. The cut of plantation thinnings was 6,085,000 super. feet, while miscellaneous species of log timber measuring 12,868,000 super. feet were also used. A total of 3,408,000 super. feet of imported timber was used, mostly by plywood and veneer mills.

Logs Used in Statistical Divisions (see Table 4).

Consumption of log timber was highest in Moreton Division with 24.9m. super. feet, closely followed by Maryborough with 24.7m. super. feet and Cairns with 23.8m. super. feet. Downs Division cut 17.3m. super. feet, and the metropolitan area 13.5m. super. feet. The remainder of the State, principally Rockhampton and Roma Divisions, accounted for 16.6m. super. feet.
